DETAILED ACTION

Allowable Subject Matter

1. Claims 1-7 are allowed.

The following is an examiner's statement of reasons for allowance: Claims 1-7 are allowed since certain key features of the claimed invention are not taught or fairly suggested by prior art. **In claims 1 and 5, “wherein the video signal line driving circuit applies to the plurality of video signal lines voltages of like polarity in the first skipping scanning process and voltages of like polarity in the second skipping scanning process as the plurality of video signals, and inverts the polarities of the voltages that are applied to the plurality of video signal lines when the driving of the scanning signal lines by the scanning signal line driving circuit switches from the first skipping scanning process to the second skipping scanning process”.** The closest prior art Morosawa Katsuhiko (JP 08-320674) teaches interlaced scanning is performed in even lines of the first frame and L and H to which polarity of display data from a drain driver is not reversed are supplied, and interlaced scanning is performed in even lines of the second frame and L and H, to which polarity of display data from a drain driver is reversed are supplied, however, singularly or in combination with other prior art, fail to anticipate or render the above underlined limitations obvious.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kobayashi et al. (6,184,855 B1) teaches an analog driver for an LCD device has sample hold circuit and buffer amplifiers divided onto one group for positive inputs and the other groups for negative inputs which buffer amplifiers are selected in accordance with a first and second control signals thereby reducing the power consumption.

Goto et al. (2004/0196231 A1) teaches a liquid crystal display panel-driving device.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mansour M. Said whose telephone number is 571-272-7679. The examiner can normally be reached on Monday through Thursday from 8:30-6:00 P.M. The examiner can also be reached on alternate Friday from 8:30 a.m. to 5:00 p.m. EST.
